Energy Efficient Building

Six Hour Online HD-Video Course

Course Description

This six hour online HD-video course will bring attention to methods of green building that allows homes to have less impact on the environment, while providing a greater economic benefit to the homeowner. Even as technological innovation creates new construction possibilities, incorporating energy-efficiency into building projects can not only provide a better quality of life, but also protect the environment. A comprehensive approach to resource and energy efficiency is the best method to achieve a resource and energy efficient building. This course will help builders identify important considerations and then apply those principles to a specific project.

This course is available online in full HD-video format. Students log in, watch each video, then take a short quiz at the end of each lesson. Students must get a passing score of at least 70% in order to move from lesson to lesson and to receive credit for the course.
