

# Florida Construction Safety Standards

(Course #0610133)

---

## Course Description

This seven hour course is a review of the safety codes required for residential construction. Students will be able to understand and describe the basic components of a construction safety program. They will recognize the hazards inherent at a construction jobsite, and describe ways to prevent those hazards. Finally they will learn the responsibilities of both the employer and the employee in observing established safety practices.

Learning objectives are provided to facilitate student understanding and progress. Informal progress checks throughout the module help students review and measure their understanding of the material. The assessment at the end of each chapter accurately reflects learning objectives. A 70% passing score on each assessment is required to move on to the next chapter. Students must answer 70% of the questions correctly on the Final Exam in order to receive credit/certification for the course.
