

Weatherization and Renewable Energy

Series B Course Syllabus

Course#SRB0005

Course Description

Building homes that are well protected from the weather should be a priority for any building professional. The majority of problems stem from improper procedures and workmanship, but often the problem is found in the design of a home. This five hour course will explore factors that contribute to exterior shell failure, and identify practical solutions that will preserve the integrity of the building envelope.

As technological innovation creates new construction possibilities, incorporating energy-efficiency into building projects can not only provide a better quality of life, but also protect the environment. A comprehensive approach to resource and energy efficiency is the best method to achieve a resource and energy efficient building.

After completing this course participants will be able to:

- Identify the components of the building as a system, its performance requirements, and how these features must be integrated to prevent building envelope failure.
 - Describe how a properly constructed building envelope will keep out weather related moisture and stop uncontrolled movement of energy due to loss of conditioned air.
 - Identify innovative design considerations incorporating energy efficient resources and components.
 - Evaluate the structural considerations when installing/mounting these new systems.
-

COURSE SYLLABUS

Weatherization I

***Learning Objectives:** 1) Understand cause and effect of weatherization problems within the construction industry. 2) Understand contractor responsibilities, what to avoid and what to embrace. 3) Recognize the cause of most below-grade moisture issues and the remedies that should be taken.

Why is There a Problem?

1. Rationale
2. Primary Warranty and Insurance Claims
3. Solutions
4. Experience
5. Contractor Responsibilities
6. Insurance Availability and Affordability

The Building Envelope System

1. Building Envelope System
2. Performance Objectives
3. Physical Components
4. Sources of Moisture Intrusion
5. Results of Failure

Foundation Construction

1. Thermal and Moisture Protection
2. Groundwater
3. Gutters
4. Crawl spaces
5. Damp proofing and Waterproofing
6. Girders and Beams

Assessment

Weatherization II

**Learning Objectives:* 1) Recognize the causes of high humidity in homes and how housewraps and flashings work. 2) Describe some of the steps and terminology for installing flashings and code minimums. 3) Know how to prepare window and door openings for proper installation.

Wall Construction

1. Wall Framing
2. Vapor Diffusion Problems
3. Recommendations
4. House Wrap and Underlayment
5. Window and Door Openings
6. Flashing and Caulking
7. Siding

Roof Construction

1. Skylights
2. Moisture Penetration
3. Roof Valleys
4. Shingles and Shakes
5. Roof Sheathing
6. Repairs
7. Flashing

Window and Door Installation

1. Windows, Doors and Skylights
2. Proper Flashing
3. Door and Window Installation

Assessment

Weatherization III

***Learning Objectives:** 1) Recognize the purpose of ventilation and ventilation requirements. 2) Understand how a capillary break works with other components to prevent moisture intrusion. 3) Be aware of consumer remedies and contractor responsibilities.

Ventilation System Installation and Requirements

1. Code
2. Attic Ventilation
3. Heating, Ventilation and Air Conditioning

Building Envelope Best Practices

1. Moisture Retarding Construction
2. Capillary Breaks
3. House Wrap Installation
4. Window and Door Installation
5. Siding Installation
6. Roofing Best Practices

Consumer Remedies

1. Common Mistakes
2. Preventative Measures
3. Warranties
4. Complaints
5. Arbitration and Dispute Resolution

Assessment

Solar Energy Use I

***Learning Objectives:** 1) Understand the difference between “passive” and “active” solar energy use. 2) Know what PV stands for, and how PV solar energy collection varies from traditional solar heat collection. 3) Gain an

awareness of the benefits of solar energy: for residential and commercial use as well as how solar energy benefits the environment.

1. Solar Energy: Passive/Active
2. Solar Photo Voltaic
3. Industry Acronyms and Terms
4. Residential and Small Business Solar Use
5. Rebates and Incentives

Assessment

Solar Energy Use II

**Learning Objectives:* 1) Understand some small business or home owner advantages. 2) Realize there is a price to pay for clean, green energy. 3) Recognize pros and cons when considering solar.

1. Small Business Systems
2. Residential Use
3. Solar Pros and Cons
4. Structural Considerations
5. Installation and Mounting Considerations

Assessment

Solar Energy Use III

**Learning Objectives:* 1) Be aware of the history of man harnessing the sun's energy. 2) Know the amount of solar energy versus conventional fuel produced energy in the United States. 3) Learn some new terms and gain an appreciation for what "green energy" really means.

1. Solar Harvesting
2. Solar Power Plants
3. Industry Acronyms and Terms

Assessment

- The Builders License Training Institute is responsible for the content of this course.
- This course is approved for five credit hours in ***CCB Residential Continuing Education: Series B***
- To have access to our online courses students must have access to a high-speed internet connection.
- Course instructors will be available by email or telephone between 9am and 5pm Eastern Standard Time. They will assist you with questions regarding course content.
- If you have any questions, please call us at **1-800-727-7104** or send an email to info@licensetobuild.com. Email responses will usually be returned promptly, but guaranteed within one business day.
- Students have six months to complete this course.
- Student policies and procedures are always available by going to www.licensetobuild.com and scrolling to the bottom of the page (See Privacy and Refund Policy).
